To Whom It May Concern:

I am writing to confirm my previous association with Dr. Zoran Pavlovic with regard to psychopharmacological research that he has conducted over the past several years. Most notable is his work investigating the anti-aggressive properties of lamotrigine in various psychiatric illnesses, including schizophrenia. To my knowledge, Dr. Pavlovic originated this concept and was able to test it successfully in a series of his own patients. I was happy to work with him in preparing the data for presentation at a major psychiatric congress (European College of Neuropsychopharmacology annual meeting) and to help provide him with the opportunity to discuss his findings with other research psychiatrists. My impressions of Dr. Pavlovic are that he possesses good clinical skills, and eye toward problem-solving, and a very creative and resourceful approach to taking the work forward. I do not have the knowledge to comment extensively on other aspects of his skills or career to date, but am happy to recommend the previously mentioned qualities for anyone currently considering him for employment.

Kind regards,
